BINDERGROUP

THE SYSTEM

The field transmitters of the COMBIMASS® eco series are suitable for flow rate measurement of compressed air and technical gases at medium temperatures up to 130°C. The flow transmitters apply thermal dispersion technology in order to measure directly the normal volumentric or gas mass flow, regardless of the operating pressure and temperature of the medium.

Even these basic flow meters of the COMBIMASS® series already perform fully digital signal processing. Important features of the transmitter electronics for the purposes of practical operation are the temperature compensation and the opportunity to select different measuring modes (choice between constant current or constant temperature priciple).

The electronics of the COMBIMASS® basic is located in a compact aluminium enclosure. As an option for this type of enclosure a 10 digits LED display for indication of actual flow rate or totalized flow is available. As a low-cost version, the circuitry can also be installed in a simple ½ DIN aluminium housing. In such case installation of a LED display for field indication of the flow rate is not possible.

As an option, a remote graphic display for wall or switch cabinet installation may be installed. On this graphic display the acutal flow rate as well as the totalized flow will be indicated at the same time. For transmission of the flow signal an isolated 4-20 mA analog output and a field selectable pulse output are available.

The flow transmitter can be assembled individually according to the specific application. Each flow meter will be tested prior to shipment and calibrated at our CAMASS® calibration centre under actual operating conditions.

SMART FEATURES

- Thermal flow meter for direct measurement of normal volumetric or gas mass flows
- Flow rate measurement unaffected by pressure and temperature fluctuations
- Aluminium enclosure
- Excellent value for price
- Compact and rugged design for exceptional reliability
- Easy to install and service
- Unmatched accuracy due to digital signal processing
- Temperature compensated flow rate measurement
- Choice of different measuring modes
- Expandable due to modular design

APPLICATIONS

- Compressed air – flow rate measurement and balancing
- Technical gases, inert and supply gases such as N_2, Ar, He, ...
- CO_2 in breweries and other beverage industries

SPECIFICATIONS

Measuring principle	Gas flow measurment based on thermal dispersion technology
Applications	Compressed air, air, technical gases, inert gases, supply gases
Measured parameter	• Gas mass flow [kg/h] • Normal volumetric flow [Nm^3/h] • Normal flow velocity [Nm/s]
Signal processing	Microprocessor based, fully digital signal processing
Measuring modes	Constant current or constant temperature principle Note: The measuring mode will be selected by our qualified technicians depending on the application requirements during calibration of the flow meter and may not be changed by the operator.
Calibration	One calibration group with advanced temperature compensation
Enclosure	cylindrical enclosure, aluminium, Ø 50 mm
Protection class	IP 68
Ambient conditions	Ambient temperature -40° C to 80° C, relative humidity 80%
Power supply	18 – 36 VDC Power supply via standard supply units possible
Power consumption	max. 1,1 Watt
Reoproducibility (electronics)	0,125% of reading
System accuracy (electronics)	0,25% of reading + 0,025% of full scale
Measuring accuracy	2,5% of reading + 0,2% of full scale (depending on application and type of calibration)
Flow range	0,46 – 46 Nm/s (standard) 0,08 – 150 Nm/s (optional)
Turndown ratio	10 : 1 to 100 : 1
Field display / control (optional)	• 10 digits, alphanumerical LED display for field indication of flow rate or totalized flow • Integrated totalizer • Control pad for field programming of the flow meter using a magnetic pin • Easy-to-use menu for transmitter set-up

SPECIFICATIONS

Graphic display (optional)	• Remote graphic display (wall or switch cabinet mounting) • Simultaneous indication of flow rate and totalized flow • Integrated totalizer • Touch pad for easy programming of the flow meter • Easy-to-use menu for transmitter set-up	
Signal output (isolated)	1 x analog output: 1 x impulse output:	4-20 mA, active load < 400 Ohm 10 Bit resolution field selectable max. 2 impulse/s
Choice of sensors	Transmitter may be combined with different sensor of the COMBIMASS® series: Sensor geometry: Process temperature: Operating pressure: Diameter of sensor rod: Material: Approvals: (optional) Certificates: Process connection: Hot tapping:	 2-pin type max. 130°C max. 40 bar 12 mm, 18 mm 1.4571 PED test certificate, modules B+F or module G 3.1B material certificate (optional) compression fitting, 1.4571, Viton manually actuated with ball valve

INLET AND OUTLET STRAIGHT PIPE RUNS

General information	To achieve high accuracy in flow rate measurement as specified, consideration of sufficient inlet and outlet straight pipe runs according to DIN ISO 5167-1 is crucial during installation of the flow transmitter. Reasonable measuring results can also be achieved with shortened inlet and outlet straight pipe runs according to the below specifications. If sufficient inlet and outlet straight pipe runs are not available, please call factory. It might be possible to achieve the required measurement accuracy, if a special calibration can be carried out at our CAMASS® calibration centre by simulating the actual operating conditions, the range of flow rates and the piping. Alternatively, the installation of a COMBIMASS® flow conditioner may allow to achieve accurate measuring results when space is restricted.
Reduction piece	Extension piece	One 90° elbow	Two 90° elbows in one plane	Two 90° elbows in two planes	Three 90° elbows in three planes
